Mutmahinat Feyisara Arowolo

Frontend Engineer & Web3 Developer

ayokomi2108@gmail.com · github.com/Feyisara2108 · x.com/Ayokomi21 · hashnode.com/@ayokomi

SUMMARY

Frontend & blockchain developer specializing in scalable React/Next.js interfaces and secure smart contracts on Ethereum (Solidity, Foundry, Hardhat) and Stellar (Soroban, Rust). Comfortable across the full dApp stack — writing and testing contracts, deploying to testnets, and building the frontends that consume them. Active open-source contributor in the web3 ecosystem.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Solidity, Rust (Soroban), HTML5, CSS3
Frontend	React, Next.js, Vite, Tailwind CSS, Framer Motion, React Router; Vue (familiar)
Blockchain	Foundry, Hardhat, Soroban; contract development & testing; ERC-20 / ERC-721; EIP-2535 (Diamond) proxy; multi-signature wallets; Merkle-proof verification; IPFS / Pinata; testnet deployment (Sepolia, Stellar)
Tooling	Git & GitHub, GitHub Actions (CI/CD), Codecov, Vercel, responsive & accessible UI

SELECTED PROJECTS

StellarGive — Lead open-source contributor Soroban · Rust · Stellar

Top contributor (180+ commits) to a transparent crowdfunding protocol on Stellar Soroban — smart-contract logic and tests for a testnet-deployed donation platform with full CI/CD (GitHub Actions, Codecov).

ScholarChain — Team project Solidity · Foundry · React · IPFS

Decentralized grant protocol distributing funding on-chain and issuing Soul-Bound Tokens as immutable proof of grant; quorum voting on Sepolia, proposal metadata on IPFS, 100% Foundry coverage.

Diamond Contract (EIP-2535) Solidity · Foundry · Hardhat

Upgradeable NFT-collateralized lending protocol using the Diamond proxy standard (ERC-20 / ERC-721 / borrowing facets over shared storage), deployed to Sepolia.

Multi-Signature Wallet Solidity · Hardhat · TypeScript

Secure multisig wallet requiring M-of-N owner approvals before a transaction executes, with a full Hardhat/TypeScript test suite covering the propose/approve/execute flow.

ERC-20 Token Faucet dApp Solidity · React · Hardhat

Testnet faucet dispensing ERC-20 tokens — token + faucet contracts, deploy scripts, tests, and a React frontend for wallet connection and claiming.

Personal Finance Tracker React · JavaScript

Live React app for tracking income, expenses, and budgets through a clean dashboard; client-side state, responsive UI, deployed to production on Vercel.

E-commerce Storefront React · CSS

Fast, responsive e-commerce landing experience built in React with reusable product components; deployed to production on Vercel.

TRAINING & EDUCATION

AltSchool Africa — Software Engineering, Frontend Track Nov 2024 – Present

Modern JavaScript, React, Next.js, TypeScript, and professional software practices.

Web3Bridge Africa — Blockchain Development Cohort Jan 2025 – Apr 2025

Advanced smart-contract development on Ethereum and Stellar; Solidity, Foundry, Hardhat, Soroban.

Web3Bridge Africa — Blockchain Development Cohort Aug 2024 – Nov 2024

Foundations of blockchain and smart-contract engineering.

OPEN SOURCE & COMMUNITY

- Leading contributor to open-source web3 protocols (StellarGive on Stellar Soroban — 180+ commits, top contributor).
- Participant in hackathons and collaborative team builds across the Stellar and Ethereum ecosystems.
- Technical writer on Hashnode (hashnode.com/@ayokomi).
