Mutmahinat Feyisara Arowolo

Frontend Engineer & Web3 Developer

Lagos, Nigeria | ayokomi2108@gmail.com | my-portfolio-eight-iota-82.vercel.app | github.com/Feyisara2108

SUMMARY

Frontend engineer with 2+ years of experience building production web apps in React, Next.js, and TypeScript, with smart-contract experience on Stellar (Soroban/Rust), Ethereum (Solidity/Foundry), and Stacks (Clarity). Currently a Frontend Developer at TSWorld Tech. Built the Web3Ladies platform, maintain StellarGive (30 contributors, 340+ contract tests), and have had 100+ pull requests merged across 40+ open-source repositories.

SKILLS

Languages: TypeScript, JavaScript, Rust, Solidity, Clarity, SQL, HTML, CSS

Frontend: React, Next.js (App Router), Vite, Tailwind CSS, shadcn/ui, TanStack Query, React Hook Form + Zod, React Router

Web3: Soroban (Stellar), Foundry, Hardhat, Uniswap v4 Hooks, wagmi / viem, Ethers.js, Reown AppKit, Stellar SDK + Freighter, Stacks.js, IPFS / Pinata

Backend & Data: Supabase (Postgres, Auth, RLS, Storage), Node.js, Express, REST APIs, Firebase Auth

Testing & DevOps: Vitest, Playwright, Foundry tests, GitHub Actions, Codecov, Docker, Vercel

EXPERIENCE

Frontend Developer, TSWorld Tech May 2026 – Present | Remote

- Build the user-facing interfaces for Flux, a browser-native state synchronization and offline-resilience platform, in Next.js, React, TypeScript, and Tailwind CSS.
- Turn product requirements and sprint plans into responsive frontend features, working with engineers and designers.
- Proposed implementation approaches and engineering improvements that the team adopted; authored the company's Strategic Distribution & Partnership Intelligence Database.

Founder & Maintainer, StellarGive (open source) May 2026 – Present | Remote

- Maintain a Soroban crowdfunding protocol and its Next.js app; recognized as an official Drips open-source maintainer.
- Review and merge work from about 30 contributors; the contract is covered by 340+ Rust tests.
- Built the CI/CD: 28 GitHub Actions workflows covering tests, CodeQL, secret scanning, Lighthouse, Playwright E2E, and contract deploy/rollback.

Technical Program Operations & Documentation Volunteer, Web3Ladies Apr 2025 – Present | Remote

- Rebuilt and launched the organization's website and admin portal in Next.js 16, TypeScript, and Supabase (Postgres, Auth, Row Level Security, Storage), replacing a no-code site.
- Coordinate onboarding and communications for 28 mentees and 4 mentors, and write the program's documentation, forms, and participant materials.

Smart Contract Developer, Cohort 14, Web3Bridge Africa Jan 2026 – May 2026

- Built and tested Solidity contracts with Foundry and Hardhat: an EIP-2535 Diamond with ERC-20, ERC-721, and lending facets, a multi-signature wallet, and token and airdrop contracts.
- Led a five-developer team through the ScholarChain capstone: planned the work, reviewed and merged pull requests, and coordinated the frontend-to-contract integration.

Open-Source Contributor, Stellar & Ethereum ecosystem 2025 – Present | Remote

- 100+ pull requests merged across 40+ external repositories: Soroban contracts, Next.js/React frontends, and Node.js backends.
- Shipped contract features (escrow events, vote delegation, multi-token payouts, batch escrow release), a security fix adding admin auth to fund reclaims, and state-machine, edge-case, and E2E tests.

PROJECTS

LP-Governed MEV Auction Hook, Hookathon project (Atrium UHI10) Solidity, Foundry, Uniswap v4, Next.js

Uniswap v4 hook that turns large swaps into on-chain auctions for execution rights, splitting searcher bids between LPs and traders under LP governance. 49 Foundry tests, deployed on Unichain Sepolia, with a Next.js + wagmi UI.

mev-auction-hook.vercel.app

SafeSale, Frontend developer, hackathon team React, TypeScript, Nostr, Cashu

Hack4Freedom first-runner-up escrow app for Instagram and WhatsApp sellers: funds are locked in Cashu ecash tied to the buyer's Nostr key, so no platform ever holds them. Built the React + TypeScript frontend (14 merged PRs).

safe-kappa-umber.vercel.app

ScholarChain, Team lead, five-developer capstone Solidity, Foundry, React, IPFS

Decentralized grant protocol: multi-donor pools, quorum voting, automatic payout, and Soul-Bound Tokens as permanent proof of grant. Solidity + Foundry (197 tests, 100% coverage), React, IPFS, on Sepolia; led the five-developer team.

github.com/Feyisara2108/scholarChain

Blockwork, Solo build (Scaffold Stacks challenge) Clarity, Stacks, Next.js, TypeScript

Bounty marketplace where the STX reward is locked in a Clarity contract until the poster approves the work, with timeouts so funds can't get stuck. Next.js + Stacks.js frontend, 16 contract tests, live on Stacks testnet.

blockwork-sooty.vercel.app

FairMark React, TypeScript, Solana, Vite

Data product that compares tokenized pre-IPO stocks (SpaceX, OpenAI…) against fair value across two issuers, verifies every token on Solana, and links out to trade. React + TypeScript with serverless API routes.

EDUCATION

AltSchool Africa, Diploma in Frontend Engineering Nov 2024 – Oct 2025

Web3Bridge Africa, Advanced Web Development, Cohort 11 Jul 2024 – Nov 2024

ACHIEVEMENTS

- First Runner-Up, Hack4Freedom Hackathon (SafeSale)
- Official open-source maintainer on Drips (StellarGive)
- 10+ technical articles published on Hashnode
